SEATING

AUDITORIUM SEATING COLLECTION

CONNECTING PEOPLE THROUGH SEATING

Ferco Seating the global market leader in public seating, places a high priority on product quality and ensures that our seating solutions meet all relevant legal and safety requirements.

To ensure our products are safe for sale worldwide, we partner with accredited testing houses to conduct thorough product testing. Our seating solutions comply with safety legislation in Europe, Asia, the Middle East, the US, and Australia. Ferco Seating is proud to hold ISO 14001 accreditation and is committed to delivering exceptional seating solutions worldwide. We adhere to international standards for materials, products, systems, and services provided in every location, including:

- UK's British Standards
- US's ASTM International Standards
- Europe's European Standards

Our products undergo rigorous assessments to ensure that they meet key criteria for:

- Safety
- Stability
- Strength
- Durability
- Flammability
- Acoustic

Ferco pays close attention to potential hazards, such as sharp edges and entrapment points in folding mechanisms, and ensures our seats can withstand normal use loads and foreseeable misuse. By doing so, the seating solutions not only meet but exceed the international standards.

ESG

DESIGNING FOR THE FUTURE

Ferco is deeply committed to environmental sustainability and providing superior workspaces. All products are manufactured in safe and eco-friendly working environments. We consistently explore innovative solutions to enhance:

- **Quality**
- **Environmental**
- **Safety management systems**

We have obtained certification of **Forest Stewardship Council (FSC)**, **ISO 14001:2015** and achieved **BIFMA e3 standard**.

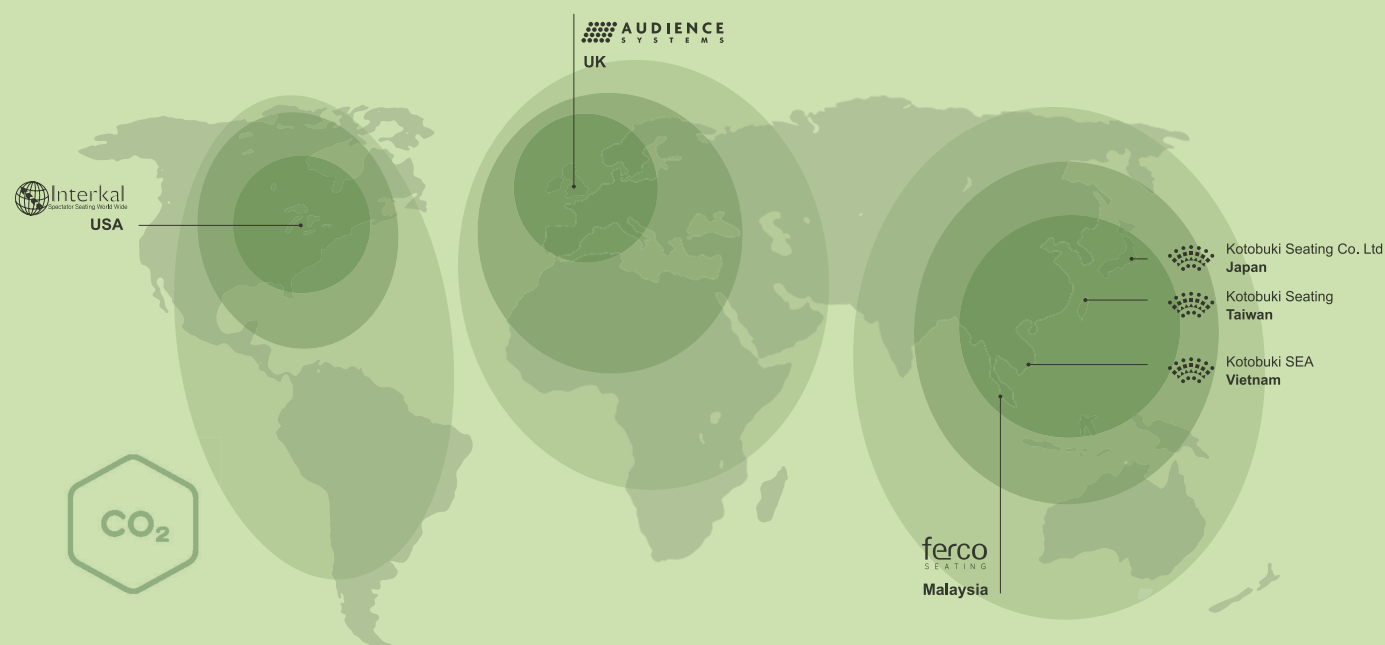

Our production and environmental management processes incorporate cutting-edge materials and construction technologies to help minimize the environmental impact.

Our rigorous **quality assurance measures**, from order placement to shipment, are meticulously documented. We strive to reduce our carbon footprint to the greatest extent possible.

In our **product lifecycle management**, the product development involves ensuring that all seating products are designed to be:

- **Durable**
- **Upgradable**
- **Recyclable**

Thereby reducing the amount of waste generated at the end of the product lifecycle.

GREEN & RECYCLED MATERIAL

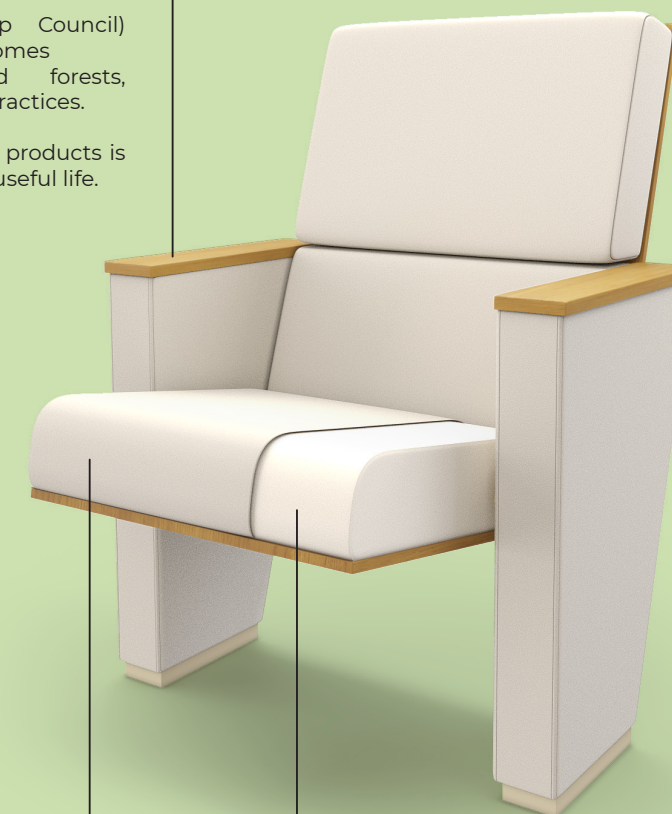

SUSTAINABLE WOOD MANAGEMENT

We use beech veneer plywood and FSC-certified wood in our seating construction. Beech is a fast-growing and renewable resource, making it a responsible choice.

The FSC (Forest Stewardship Council) certification ensures the wood comes from responsibly managed forests, promoting sustainable forestry practices.

The wood used in Ferco Seating products is 100% recyclable at the end of its useful life.

ECO-CONSCIOUS UPHOLSTERY

We offer a selection of upholstery options crafted from recycled PET bottles. This innovative approach gives a new life to plastic waste, diverting it from landfills and promoting a circular economy.

Not only is the source material recycled, but the fabric itself is also 100% recyclable at the end of its lifespan.

RESPONSIBLE FOAM SELECTION

We incorporate recyclable foam in our seating, reducing our reliance on virgin materials. This approach minimises environmental impact while maintaining the comfort and support our seats are known for.

The foam used in Ferco Seating products is also 100% recyclable for further environmental benefit.

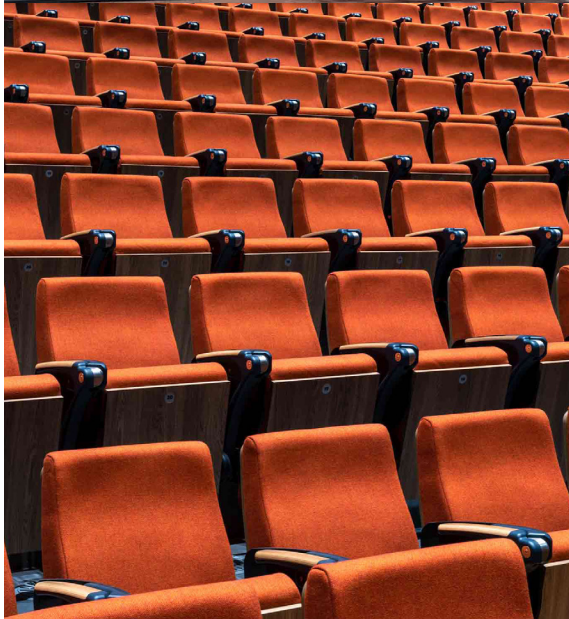

* Based on selected material upon customer request

TAILORED SEATING SOLUTION FOR EACH SPACE

In the realm of auditoriums, theatres and convention centres where individuals convene for shared experiences encompassing work, education, and entertainment, Ferco stands as a beacon of flexibility and innovation. Every space possesses its unique character, and as seasoned designers and manufacturers of seating solutions, Ferco excels in the art of adaptation and personalization to align with brand and design vision.

Ferco is committed to crafting exceptional seating solutions that enhance your space's aesthetics and optimize its acoustics. The soundscape around the venue has a profound impact on the audience, our expertise in designing and manufacturing acoustically compliant products ensures that every seat contributes to a superior auditory experience.

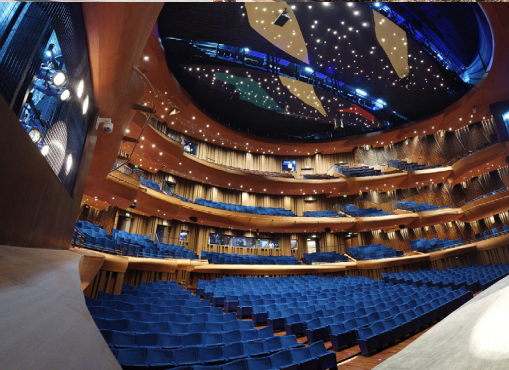

From flexible layout options to meticulously crafted details, our seating solutions are designed to elevate every experience. We collaborate closely with clients to ensure that each project reflects their unique vision and exceeds expectations.

Auditoriums are spaces where people gather for shared experiences, be it work, learning, or entertainment. Each venue is unique, and at Ferco, we specialize in designing and manufacturing seating solutions that cater to your specific needs.

Our seats are highly customizable; we manufacture auditorium seating that can be tailored to match your exact design brief, and a variety of personalization options are available with a variety of wood finishes. We work closely with acoustic consultants to ensure producing the right seat that can minimize noise transmission from one space to another and control the characteristics of sound within the spaces to create an immersive experience for your audience.

Many of our seats have the capacity to include integrated power for charging, or for auditoria with fixed writing ledges, there is the option to install this seamlessly into the structure of the writing surface. Some models even feature removable seats for easy maintenance and increased flexibility.

Your auditorium layout should conform to certain guidelines for fire escape and egress. Our seating design plans and layouts are free and use Technical Standards to ensure compliance with recommended guidelines.

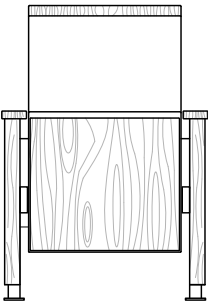

By combining form and function, Ferco delivers seating solutions that enhance the ambience and functionality of your auditorium.

DESIGN

Timeless Comfort, Endless Possibilities

The Tokyo BR embodies Quinette Gallay's commitment to enduring design and exceptional comfort. Its classic design, coupled with versatility features, makes it a popular choice for a wide range of venues.

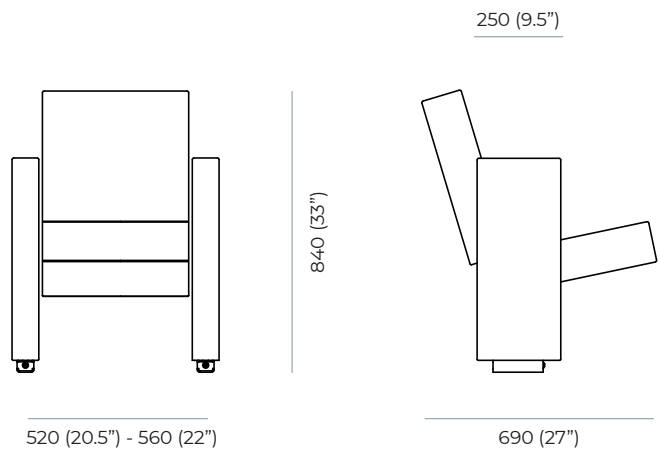

FEATURES & SEATING OPTIONS

- Customizable Options: Tailored to your specific needs with a variety of finishes and features.
- Versatile Installation: Adaptable to various seating layouts and spaces.
- Quiet Operation: Smooth, soft-close mechanism ensures a serene environment.

Tokyo BR

8023

DESIGN

Compact and Convenient

The 8023 is a cubic-designed piece that combines innovative features with functional efficiency. Its clean, straight lines create a perfectly aligned seat. The distinctive cubic shape optimizes space utilization, and both the seat and backrest are mobile. This design is ideal for environments where efficient seating and stylish aesthetics are essential.

FEATURES & SEATING OPTIONS

- Distinctive Design: Boxy shape for a modern and unique look.
- Space-Saving: Compact footprint for efficient space utilization.
- Versatile Installation: Adaptable to various mounting options including telescopic platforms, K-Roll benches with movable wheels, KUF systems and fixed seat configuration
- Smooth Operation: The silent, synchronized folding mechanism ensures a seamless user experience.

K-ROLL

Effortless Mobility

K-Roll offers a flexible and efficient seating solution for multi-purpose venues. This innovative system allows for easy rearrangement of seating configurations without compromising comfort or style.

The leg assembly incorporates a lever mechanism equipped with a foot-activated trigger. This innovative trigger effectively locks the wheels and secures the seats to the floor, eliminating the necessity for screws or fasteners.

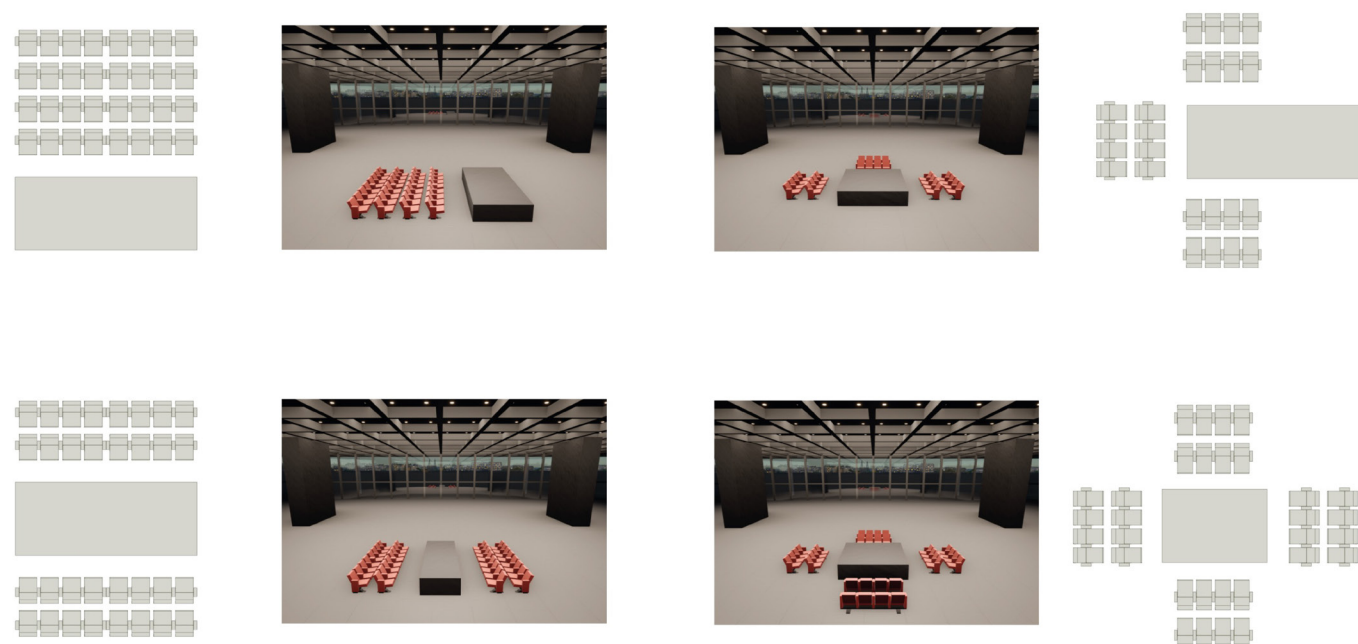

The K-Roll seating arrangement features groups of 1, 2, 3, or 4 seats on benches, supported by two self-supporting metal legs equipped with retractable wheels.

This design allows the benches to move freely in any direction, facilitating seamless 360-degree mobility. Making it easy to rearrange them as needed.

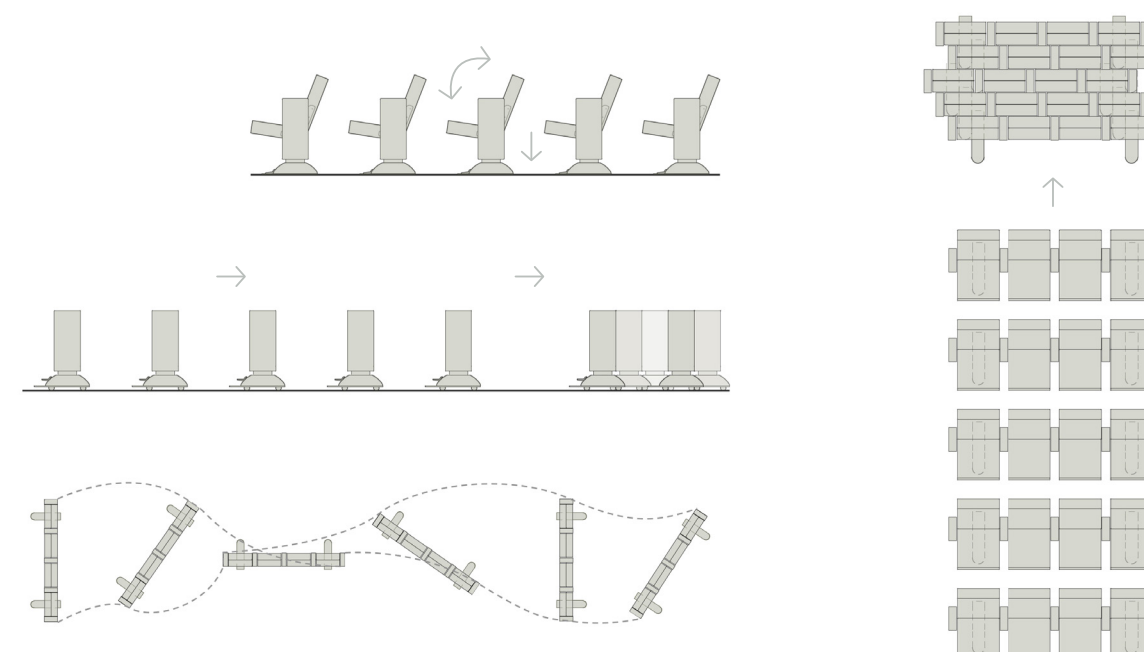

With K-Roll, we can adapt the seating layout according to the requirements of each event, allowing for simple movement without the need for additional mechanical components.
